Perfect from the cast  
right through to delivery

Everything in stock!

Jürgens Logistics Centre which was opened in 2012 is equipped with innovative technology and systems – from quality control to the high-bay warehouse and on right through to the barcode scanning system. And thanks to our casting logistics (GLO) your cast parts are shipped to you directly just as soon as you request them.

## QLO system ASQ with integrated packaging system

Semi-automatic storage system with barcode scanning

- ♦ in six aisles

- ♦ approx. 3500 storage locations, of which
  - ♦ approx. 1561 for pallets
  - ♦ approx. 1759 for lattice box pallets
  - ♦ approx. 180 special format locations
  - ♦ approx. 200 storage and retrieval operations per working day
- ♦ equipped with a fully-automatic packaging system
- ♦ with five upstream cast part control locations and linear feeding into the storage system

# Jürgens Logistics Centre: Castings on demand!

## Our benefits:

- ♦ Outsourcing of warehousing
- ♦ Lower costs
- ♦ High level of reliability - JIT possible
- ♦ No change of system necessary

Welcome to Jürgens Logistics Centre Emsdetten – one of the most innovative in the branch with its state-of-the-art equipment. Quality control directly in the logistics centre, high-bay warehouse, barcode scanning system:

the casting logistics system reduces the delivery time of your cast part down to just the transport time!

### Zero defect mentality

The quality of all castings, whether from our suppliers or our own in-house products, is tested directly in the control area of the logistics centre. Various quality controls such as ultrasonic tests, hardness testing, crack testing and chemical analyses are carried out in accordance with customer specifications.

Only cast parts that meet the strictest requirements are passed on by our computer-

controlled system for delivery to the customer or for storage in the high-bay warehouse. Our barcode scanning system ensures that every casting or transport box is allocated to its right location.

### Kanban, Just-in-Time & Co.

Leave the expensive storage of your cast parts up to us. Our warehouse and barcode scanning system in Emsdetten offer you all the benefits of intelligent logistics and production strategies such as just-in-time and decentralised production controls such as Kanban. Your cast parts are not sent to you until you call them up – they then go off reliably, quickly and safely.

Link your production planning with Jürgens Logistics Centre - and save valuable time and storage space.

### Coding in line with your system

Your individual logistics system is taken into account for coding. That means you can use your delivery straight away with no loss of time.

### Customised delivery formats

Standard euro-pallets, lattice box pallets or special formats? No matter which delivery format you need – we have it. If your delivery includes fragile parts, these are packed in our automatic film packaging system, so they are well protected during transport.

Does that sound good? Then find out more – we look forward to receiving your call!
